

**XL** Lighting  
for **XL** Spaces

gymnasiums ... pools ... passenger terminals ... field houses ... atriums ... galleries ... canopies ... convention halls ... big boxes

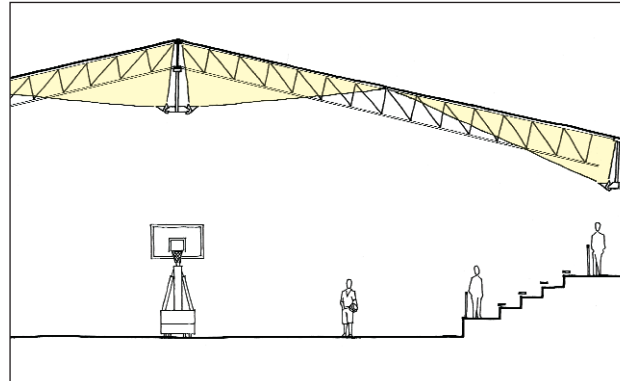

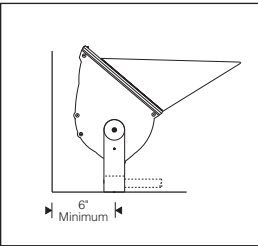

## Style 117 Remote Ballast

elliptipar's **XL** reflector teamed with 1000W or up to 2X400W pulse start lamps ... high output metal halide uplighting for big spaces. Powerful for its size, impressive in its controlled performance.

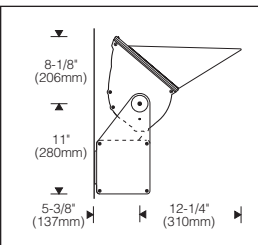

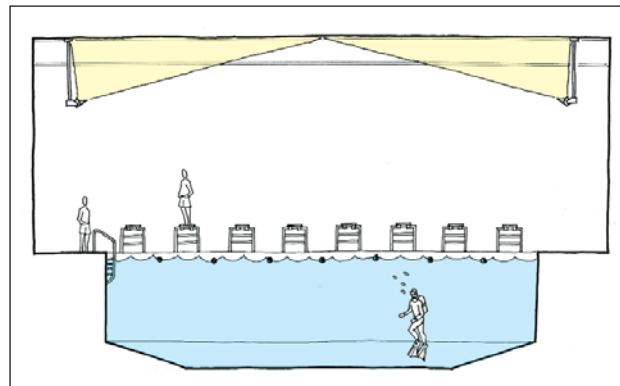

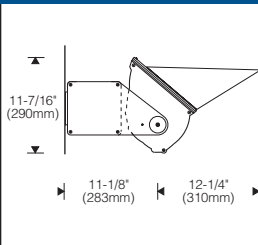

Choose the remote ballasted **Style 117** or the integrally ballasted **Style 417** with a clear lens for maximum peak candlepower, or a micro-prismatic lens for smoother distribution on the lighted surface. The cut-off visor (standard) provides shielding.

Lighting a ceiling asymmetrically from one edge creates a diffuse illumination of the entire plane ... offers easier access for luminaire maintenance.

- Encapsulated CWA ballast for quiet operation
- UL/CSA certified for damp locations
- Latch/hinge mounting (Style 417) for hands free access to splices, ease in handling each 65 lb. ballasted luminaire

## Style 417 Integral Ballast

  
**elliptipar**  
 ... there is no equal™
